

### **Non-GMO Statement for Pure Maple Syrup**

Our pure maple syrup is produced solely from the sap of the maple tree which is inherently GMO free. The only processing aid that could be found in the finished product is for de-foaming purposes and is standard throughout the maple industry.

The most widely used commercial de-foamer in conventional maple syrup operations is Atmos 300k produced by Caravan Ingredients. It is derived from mono and di-glycerides sourced on the open market. GMO Status cannot be confirmed in the finished product as the genetic structure is altered in the refining process.

The finished product composition of our maple syrup is 99.99% sap of the maple tree and 0.01% de-foamer putting it well below the 0.5% thresholds set by the Non-GMO Project standard for food products.
